Search Page in Journals@Ovid (Basic Search)

The screenshot displays the Journals@Ovid search results interface. On the left, the 'Search Information' panel shows the search terms used: 'stroke', 'apoplexy', 'apoplexies', 'cerebral stroke', 'cerebrovascular accident', 'cerebrovascular apoplexy', 'cerebrovascular stroke', 'strokes', 'vascular accident brain', 'cva', and 'stroke cerebrum'. Below this, the 'Filter By' section includes 'Add to Search History', 'Selected Only (0)', and 'Relevancy' filters for Years, Journal, and Publication Type. The 'My Projects' section shows '+ New Project' and 'No projects available'. The 'JBI EBP Tools' section is at the bottom left.

The main search results area shows three results, each with a star rating (★★★★★) and a relevance score (★). The first result is 'Incidence of Park... electronic health...'. The second result is 'A rare mimic of acute stroke: rapidly progressing Miller-Fisher Syndrome to acute motor and sensory axonal neuropathy variant of Guillain-Barre Syndrome'. The third result is 'Releasing forced grasp reflex by use of concomitant imitation behaviour during rehabilitation of a stroke patient'. Each result includes the authors, journal name, and a link to the full text or abstract.

Annotations on the screenshot include:

- A red box around the 'Search terms used:' section in the left sidebar.
- A red box around the star rating (★★★★★) for the first result.
- A purple box around the text 'Search Results' and '최신 저널 중 Relevance(관련성)이 가장 높은 순으로 결과를 나열 (★의 개수)'.
- A purple box around the text 'Related Terms 나열'.

On the right side, there are links for 'Print', 'Email', 'Export', '+ My Projects', and 'Keep Selected'. Below these, there are links for 'Find Similar' and 'Find Citing Articles'. At the bottom right, there is a section for 'OPEN ACCESS RESULTS' with a list of articles and their authors.

Online date: February 12, 2021

I am a third-year orthopaedic resident. At the end of December 2020, I received my first dose of the COVID-19 vaccine. The entire experience was a surreal one. Although she did not pass away from COVID-19 itself, she spent her final months without visitors in an assisted-living facility and was alone in a hospital room for most of her final hours because of COVID-19-related distancing regulations. I remembered a frail yet otherwise healthy patient whom I had admitted because of a hip fracture. Following her treatment and hospital stay, she had been discharged to a rehabilitation facility. Two weeks later, she was readmitted to our hospital, having contracted COVID-19. Sadly, she succumbed to the virus. I recalled feelings of fear and uncertainty when encountering my first operative case in which the patient was confirmed to be COVID-19-positive, with strict attention to all of the accompanying protocols required. Now, as the pandemic has continued, our protocols and precautions have become all too familiar. Above all, I contemplated the virtually unfathomable number of fatalities, which now total >400,000 and counting in the U.S. alone.²

After receiving the vaccine, I was ushered to an auditorium where I was instructed to sit for 15 minutes to ensure that I did not experience any immediate negative effects. Supervising providers watched over the scattered and socially distanced crowd of fresh vaccine recipients. Soothing music played over the auditorium speakers.

I reflected.

I thought about the preceding 10 months, including those early days of the pandemic when just walking into the hospital felt like stepping into an all-too-uncertain and high-stakes experiment. I remembered the colleague with whom I had graduated from medical school in 2018. A father of 3, he was one of the first American health-care workers claimed by COVID-19.¹ I thought about my wife's grandmother. Although she did not pass away from COVID-19 itself, she spent her final months without visitors in an assisted-living facility and was alone in a hospital room for most of her final hours because of COVID-19-related distancing regulations. I remembered a frail yet otherwise healthy patient whom I had admitted because of a hip fracture. Following her treatment and hospital stay, she had been discharged to a rehabilitation facility. Two weeks later, she was readmitted to our hospital, having contracted COVID-19. Sadly, she succumbed to the virus. I recalled feelings of fear and uncertainty when encountering my first operative case in which the patient was confirmed to be COVID-19-positive, with strict attention to all of the accompanying protocols required. Now, as the pandemic has continued, our protocols and precautions have become all too familiar. Above all, I contemplated the virtually unfathomable number of fatalities, which now total >400,000 and counting in the U.S. alone.²

As surgeons, we excel through a certain amount of disassociation and suppression of our feelings. How else could we reduce a fracture in the emergency department or cut into someone in the operating room without being crippled by our emotions? But in those 15 minutes that I waited after receiving the vaccine, I recognized that the ease with which I had received the shot was in stark contrast to so much pain worldwide. All of my suppressed emotions from the previous 10 months flooded to the surface: frustration, anger, and sadness over the virus, its toll, and its pervasive impact on all of our lives, but also pride, wonder, and gratitude at the responses of the science and health-care communities to the virus.

When the 15 minutes were up, I left the auditorium, the soothing music fading as I walked away. I returned to my duties in the operating room and assisted with a periacetabular osteotomy.

What's Important: Widespread Vaccination

Reflections on the Pandemic, Contracting COVID-19, and the Opportunity Before Us

Alexander M. Crawford, MD

I am a third-year orthopaedic resident. At the end of December 2020, I received my first dose of the COVID-19 vaccine. The entire experience was oddly routine. I made an appointment via email, showed up at the assigned time to the designated location within my health-care institution, and received my shot. In standard 21st century fashion, I was asked if I wanted my photo taken while receiving my vaccine, to which I readily replied yes. After all, it felt like an historic moment.

After receiving the vaccine, I was ushered to an auditorium where I was instructed to sit for 15 minutes to ensure that I did not experience any immediate negative effects. Supervising providers watched over the scattered and socially distanced crowd of fresh vaccine recipients. Soothing music played over the auditorium speakers.

I reflected.
